

## Director configuration

( bacula-dir.conf )

### Catalog {

Name  
Address  
Database  
Username,  
Password  
to store meta-data  
}

### Director {

Name,  
Address,  
Password  
}

### Messages {

Messages sent  
between  
daemons  
or services  
Emails  
Console messages  
}

### Client {

Name  
Address  
Port  
Password  
of the client to  
back up  
}

### Job {

Client (who)  
File Set (what)  
Schedule (when)  
Pool (where)  
Storage (where)  
}

### Schedule {

Defines  
when this job will  
be run.  
May contain pool,  
level and  
other information  
}

### Storage {

Logical storage  
to use  
Points to the  
corresponding  
device on Storage  
Daemon  
}

### Pool {

Storage to use  
Volumes (size,  
number of)  
Retention  
Recycling  
}

### File Set {

Files and directories  
to back up  
Files and directories  
to exclude  
Plugins to use  
}

## Client configuration

( bacula-fd.conf )

### File Daemon {

Name  
and general  
configuration  
}

### Director {

Name,  
Authentication  
parameters  
}

### Messages {

Messages sent  
between  
daemons  
or services  
Emails  
Console messages  
}

## Console configuration

( bconsole.conf )

Describes  
which directors  
this console can  
connect to.  
}

# Resources definition at a glance

## Storage daemon configuration

( bacula-sd.conf )

### Storage {

One resource  
for general setup:  
Name  
Authentication  
}

### Director {

Name,  
Authentication  
parameters  
}

### Messages {

Messages sent  
back to  
the **director**  
}

### Device {

One per device  
Device's  
characteristics  
/dev/xxx  
}
